Back-Contact Solar Technology Endurans[™] Solar will take you a long way

Peter Pasmans, Lawrence Theunissen, Hugo Schoot

February 16, 's-Hertogenbosch

Welcome to Endurans[™] Solar

A global solar materials solution provider

Since June 2021

Since February 2023

We believe that the solar industry has a huge role to play in creating a better, more sustainable future for our planet.

And we are making this a reality by boosting the performance of PV modules and developing solutions that are circular by design.

Endurans[™] Solar in a nut shell

Innovative material solutions for solar panel manufacturers

Production facilities across Asia, Europe & America

Market leader in co-extruded backsheets. Endurans™ HP All-purpose Sustainable Market leader in conductive backsheets. Endurans™ CB For high-end aesthetics & output

Pipeline of new solar films: Encapsulants Flex frontsheets Rear Perforated Insulators

Our products

Game-changers in technology, sustainability and performance

Back-contact solar technology with Endurans[™] CB/RI

Back-contact technology for high-power modules

When high power density, flexible design and aesthetics count

Residential and commercial rooftop

Building Integrated PV

Vehicle Integrated PV

Back-contact module technology

Cells combined with conductive backsheets (CBS)

The BC cell interconnection is obtained during the lamination process using a conductive paste

Back contact modules with CBS interconnection

Endurans[™] Conductive Backsheet (CB) and Rear Insulator (RI) products

Conductive backsheet

- Rear side insulation
- Cell interconnection
- Commercial >5yrs

Rear perforated insulator

- Internal insulation contacts (+/-)
- Holes for contact points
- Black (or white)

Endurans[™] Conductive Backsheets

Enabling high power back-contact technology

- Launched in 2018, designed for high power density back-contact modules
- Innovative cell interconnection concept, integrated in the backsheet of the module, allowing all electrical contacts to be positioned *at the rear* of the solar cell
- No metallization at the front of the cell, so more sun can be captured
- Modules with back-contact technology deliver *higher efficiency* and *great aesthetics*
- Flexible design, compatible with different cell configurations

Rear Perforated Insulator (RPI) development at Endurans™

Drive for cost reduction, higher performance and sustainability

- Unique material concept based on the Endurans[™] proprietary HPO technology
 - Polyolefin based fully recyclable
 - Dimensionally stable
 - Excellent flatness
 - Unparalleled adhesion to cells, metal foil and backsheet
- Unique perforation technology
 - High speed
 - High accuracy
 - No risk of chads or ridges

Performance

Superior power density

Superior power density

With Endurans[™] CB and RI

Power density

- Maximal use of area \rightarrow integrated bussing
- Minimal resistive losses \rightarrow tapered interconnection
- Reduced operating temperature \rightarrow heat spreading

High reliability

- Highly automated manufacturing
- Cell handled only once in module production
- Less risk of cell damage
- Thickness down to 90 µm has been proven
- Improved tolerance to cell defects (e.g. cracks)

Performance benefits and end-user endurans value of conductive backsheets for back-contacted solar modules Authors: Peter Pasmans, Guido Meijers, Imco Goudswaard, Hugo Schoot Endurans[™] Solar, Mauritslaan 49, 6129 EL Urmond, The Netherlands IBC and CBS: the ideal combination! About Endurans[™] CB Interdigitated back-contacted (IBC) solar cells Endurans[™] Solar (formerly DSM Advanced and conductive backsheets (CBS) are the ideal Solar, acquired by Worthen Industries Inc. in combination to enable high-efficiency solar 2021), is a leading supplier of science-based modules and are of great value to both the material solutions for PV modules: module maker and end-user. Endurans™ HP, high-performance polyolefin backsheet which is fully recyclable Simulation results which substantiate some of Endurans[™] CB, a conductive backsheet for the key advantages of using a CBS for high-efficiency, aesthetically pleasing backinterconnection are presented and the value contact solar modules, based on metal wrapcreated for the module maker and end-user is through (MWT) or interdigitated backdemonstrated by a detailed cost calculation contact (IBC) technology. Key advantages of back-contact technology with CBS interconnection Higher cell efficiency of back-contacted cells → less (MWT) or no (IBC) front metallization on cell Highly automated manufacturing and less risk of cell damage → each cell is only picked and placed once; down to 90 µm thick cells has been proven Smaller module area = higher efficiency → no bussing area required (integrated in CBS with flexible pattern design) Higher energy output → reduced operating temperature (CBS helps heat spreading) and improved low-irradiance performance (with full cells) Reduced electrical losses → shown by Comsol simulations: Full-cell IBC interconnection: ribbon vs CBS Half-cell IBC interconnection: ribbon vs CBS WCPEC-8 2022 in Milan R = 1.60 mO P_{ben} = 202 mW R = 0.83 mQ Pmm = 26 mW D. - 50 mb ssumptions: M6 cell size with 6 busbars / polarity; ribbon cross-section: 1.0 x 0.2 mm; CBS thickness: 35 µm; losses in solder paste not included in above simu Value creation for module maker and end user · A detailed cost-analysis for different IBC interconnection options has been performed using optical and electrical simulation results as input. The table below shows the performance difference between modules using 6 busbar Zebra IBC cells for ribbon vs CBS interconnection. The power density is ~2.9% (for HC) or ~3.4% (for FC) higher when using a CBS compared to ribbon interconnection of half cells. The specific yield is ~1.5-3.5% higher due to thermal and low-irradiance benefits (see EU PVSEC, 2020, 4AV.1.18) The total increase of 4-7% in energy yield with CBS allows for an increased module price vs. ribbon module design. The added value of the module across the value chain is presented in the graph below.

Conclusions

The results presented in this work demonstrate that using conductive backsheets for interconnection of IBC cells, compared to ribbon interconnection, can improve module efficiency by ~0.6-0.7% (absolute) due to reduced resistive losses and reduced module area. An additional value of ~0.03 €/Wp can be created for both the end-user and the module maker.

CBS increase performance vs other technologies

Comparison of key performance parameters

• Performance calculations based on a combination of simulation tools:

COMSOL

Cell → Interconnection →	PERC Half cell 12 BB	MWT Full cell CBS	IBC Half cell ribbons	IBC Half cell CBS	IBC Full cell CBS
# Cells	6x20 HC M6	6x10 FC M6	6x20 HC M6	6x20 HC M6	6x10 FC M6
Module area (m ²)	1.86	1.76	1.80	1.77	1.76
Module power (Wp)	358	368	374	378	378
Module power density (Wp/m ²)	192	209	207	213	214
Specific yield (kWh/kWp)	1100	1138	1122	1138	1160

Value model presented in more detail at Back-Contacted workshop 2022 in Konstanz Available at: www.endurans-solar.com

Flexibility Optimal design freedom

Optimal design freedom

With Endurans[™] CB

Freedom to optimize string layout

- Bussing integrated in CBS design
- Optimal use of area
- Irregular shapes
- Shading tolerance

Ideal for curved modules

- Cell layout can be optimized for curvature
- Reduced stress on cells (no ribbons)

Aesthetics

Great appearance

Great appearance

With Endurans[™] CB: less/no cell metallization - no ribbons – all black

Conclusions

Back contact Solar Technology

Endurans[™] CB will take you a long way
